

DESIGN-BUILD

ENERGY AIR, INC.

Nobody Works Harder.

At Energy Air, we work with owners, architects, engineers and general contractors to complete a variety of design-build projects. Our goal is to provide a high-quality HVAC system while taking into consideration your project timeline, budget and operating costs when the project is complete.

Design-Build Team We have a “Team Attitude and Approach” on all projects. Our design-build team will work with your engineer or we can select the right engineer for your project based on experience.

We’ve worked with full construction documents utilizing BIM technology as well as conceptual designs drawn on a napkin. Whatever your HVAC needs, Energy Air can deliver value for your project.

Pricing We’ll help establish a budget for your HVAC system that works within your overall project budget. We will provide preliminary pricing as a part of the due diligence phase or develop a complete project scope with an accurate estimate. Plus, we provide cost reviews as drawings progress.

Technology We use the latest technology systems and communication tools to work effectively, innovatively and efficiently with the entire design team. From coordination of drawings in the schematic phase to installation onsite, we are a unified team with the same goal in mind.

Solutions We’ll identify project challenges, devise solutions and make cost and time-saving recommendations.

Coordination We coordinate with other trades up front, acting as one unified team for a smooth transition from preconstruction to construction. This process eliminates the need for a value engineering process as well as unexpected change orders.

RECENT DESIGN BUILD PROJECTS

Orlando Regional Medical Office Building • CKS Packing Plant • The Westin at Heathrow • Dynetech Centre • Orlando Lutheran Towers • UCF Student Housing at Knight’s Plaza • The Plaza Downtown Orlando • Fossil Lab • Orlando Diocese • Convergys • AmSouth Banking Check Facility • 131 N.
