

HEALTHCARE PROJECTS

ENERGY AIR, INC.

Nobody Works Harder.

Energy Air specializes in performing the HVAC scope for a variety of healthcare facilities. We've been in business since 1976 and have completed numerous successful healthcare projects including a variety of hospital renovations, assisted living facilities, medical office buildings, inpatient care facilities and outpatient care facilities.

Trust your healthcare projects with our ICRA-trained team. Our in-house training facility includes a complete containment room. Our team brings extensive healthcare project experience in HVAC system installation and renovation in both live hospitals and clean room environments. We are licensed and certified to complete medical gas piping installation and are experienced in performing shut-downs pertinent to operating rooms, including maintaining relative humidity for sterilization purposes and supplying back-up air systems.

Our Energy Air commercial healthcare team travels with a specialized healthcare trailer that stores all negative air equipment necessary to maintain an operating room during a shutdown. This ensures all equipment needed is on site and readily available and allows us to keep full control of the environment the equipment is kept in.

"Energy Air was involved from the first day of conception on the Orlando Lutheran Towers Assisted Living Facility and was a vital asset in the design of the facility. Energy Air assisted Jack Jennings and Sons and the Design Team through the maze of design options for an efficient HVAC System." ~Steve Buskirk, Senior Project Manager, Jack Jennings & Sons Construction Services

Family-owned and operated since 1976

\$40 million bonding capacity

Trained field healthcare team- ICRA, Bloodborne pathogen, OSHA

MOD at .80 zero accident approach

Self-perform entire HVAC scope

In-house fabrication

In-house CAD/BIM Team
